

End-of-line customers choose one system, one supplier – and full compatibility

One of the unique possibilities with the SOCO SYSTEM product range is the opportunity to build a fully automatic packaging line based on modules from the same manufacturer.

SOCO SYSTEM distinguishes itself from other suppliers by handling everything from case erecting to pallet securing in the packaging process – all from ‘the same kitchen’ according to the philosophy.

By Ebbe Fischer

After 59 years, SOCO SYSTEM has a strong position on the market with a complete end-of-line system. A system that consists of seven product groups that can be combined in different solutions from one-man packaging stations to fully automatic packaging lines.

As an example, the product group Case Sealers consist of 12 different case sealers with both semi- and fully automatic models. For the past 50 years, more than 140,000 case sealers have been produced in the factory in Nykøbing Mors, Denmark.

Flexible building blocks

Marketing Director Ole Bergstein says that SOCO SYSTEM product modules can be compared to building blocks for adults. “You can start wherever the initial need emerges, and then you can extend and build upon the system as the need changes” he says.

The company’s design, development, and production are rooted in Denmark and based on the latest and most up-to-date technology.

“Everything is compatible and produced to fit together - there are spare parts for the entire life of a product, which has proved to be long.

Daily we receive requests for spare parts for machines that have been in operation more than 25 years” Ole Bergstein says. He adds that there is a desire to deliver and to service quality solutions. “Solutions for both packaging and in-house logistics that can provide customers with a competitive advantage as well as a better physical work environment”.

Automation and ergonomics

According to Ole Bergstein, a global trend focusing on automation and the elimination of strenuous work – for example heavy lifting and repetitive movements – has been a contributing factor to a full order book.

“I am experiencing that we as a company are very privileged in these difficult times influenced by Corona and other challenges. At the moment, the volume of orders is actually greater than we have experienced in years”.

End users and partners

“Over the years, our products have become an end-of-line solution for many production companies in Denmark, Scandinavia, Europe – and actually all over the world”, Ole Bergstein elaborates. “Integrators, project companies, and OEMs often also use our product modules in their solutions. Typically, we provide equipment for the basic end-of-line flow of the production line. And our modules are ready to be integrated with specialized free arm robots, cobots, agvs, and much more”.

At socosystem.com you can make an account and request access to an online product configurator, where all company products can be downloaded in 3D.

ABOUT SOCO SYSTEM:

SOCO SYSTEM was founded in 1961 and is based on a philosophy that has made the company one of the global market leaders when in development, production, and marketing of a wide, modular, end-of-line product range for conveying and handling of retail- and shipment packaging as well as pallets.

SOCO SYSTEM’s compact palletising robot at Arla Foods in Gjesing Denmark only takes up a bit more space than a single pallet. The touch screen and software ensure first class user-friendliness, which for example makes it quick to calculate new and improved pallet patterns or change existing ones. Photo: SOCO SYSTEM

One man pack station

Complete system solution

The end-of-line products range from one-man packaging stations to fully automatic packaging lines – the illustration on the right shows a system at an international company in the food industry.

“ Everything is compatible and produced to fit together - and there are spare parts for the entire life of a product, which has proved to be long.
